

## HYDRAULIC RESCUE RAM

TEKNIPLUS Telescopic Rescue Rams are designed to lift and push the material. They are designed for vehicle rescue, accidents on rails and ships or the cases of building collapses caused by natural disasters.

### Advantages:

- Faster and safer rescue.
- Minimum overall height and greater stroke.
- Gripping claws on the piston rod and in the cylinder base provide secure grip on sloping and smooth surfaces.
- Claws rotatable by 360;
- Rigid Alloy Steel Body;
- Rigid Aluminum alloy cylinder.

| Model No. | Max. Working Pressure (bar) | Capacity (Ton) |          | Oil Capacity (cm3) | Retracted Length (mm) | Extended Length (mm) | Total Lift (mm) | Height (mm) | Weight (Kg) |
|-----------|-----------------------------|----------------|----------|--------------------|-----------------------|----------------------|-----------------|-------------|-------------|
|           |                             | Piston-1       | Piston-2 |                    |                       |                      |                 |             |             |
| TRS-27    | 690                         | 26             | 13       | 1735               | 548                   | 1250                 | 702             | 220         | 19.8        |
